

NUCLEUS

by roon

*The foundation of a powerful and immersive multi-room music system
Developed by Roon Labs in collaboration with Intel*

Designed for music and audio enthusiasts, Nucleus is the centerpiece of a high-performance multi-room music system that works with a huge family of audio products. Now you don't need a PC or NAS to enjoy music with Roon; just connect Nucleus to your network and control it from your phone, tablet, and Mac or Windows computer.

HOW IT WORKS

Nucleus requires no configuration; just connect it to your network and download the Roon app for iOS, Android, macOS, and Windows to control it.

You can install an internal hard drive or SSD for content storage, add an external USB drive, or keep your music on a NAS.

For audio playback, just connect a USB DAC or stream to any of the huge family of network players supported by Roon, including Roon Ready, Sonos, AirPlay, Devialet AIR, Meridian, and Squeezebox.

SPECIFICATIONS

Nucleus

The Roon core for everyone, this fanless appliance features Gigabit ethernet, 2x USB 3.0, Thunderbolt 3, an internal 2.5" bay (for hard disk or SSD), and an external power supply.

- Libraries up to 12,000 albums (120,000 tracks)
- Multi-room systems up to five zones
- Limited DSP (EQ, headphone crossfeed, etc.)

Nucleus+

The ultimate Roon core for the power user, this fanless appliance features Gigabit ethernet, 2x USB 3.0, Thunderbolt 3, an internal 2.5" bay (for hard disk or SSD), and an external power supply.

- Large libraries over 12,000 albums (120,000 tracks)
- Multi-room systems over five zones
- Extensive DSP (upsampling, convolution, etc.)

ROON PARTNERS

Nucleus is designed to work with products from the manufacturers you trust. Over 60 partner brands now work with Roon, and the list is growing every day!
